

FROM POLAND

Preventive and orthopaedic footwear

FOR SENSITIVE AND DIABETIC FEET
AND FEET WITH INCREASED WIDTH FITTING

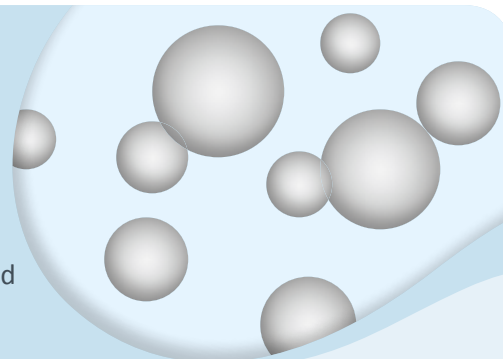

Characteristics

OF DR ORTO FOOTWEAR

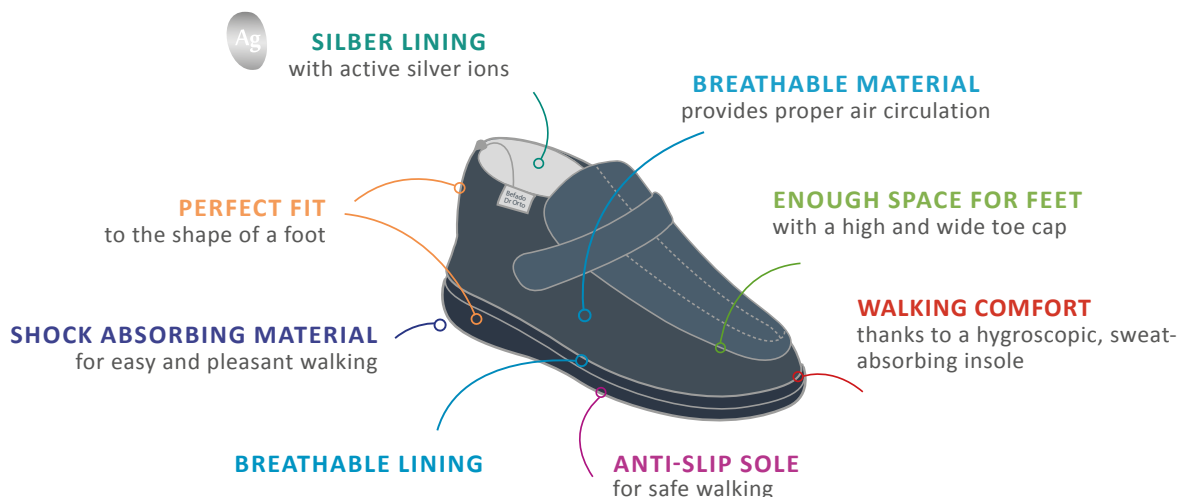

1. This footwear is intended for users with sensitive feet, including the ones suffering from the diabetic foot syndrome and from feet rheumatoid degenerative changes. Dr Orto is a functional footwear with pro-health qualities; the shapes and sizes of the inside respond perfectly to the needs and requirements of ill users' feet.
2. As Dr Orto footwear is manufactured on a wide-fit last, our shoes are wide inside and have uppers that do not pinch a foot at any point. Wide and high toe cap ensures enough space for toes and eliminates the risk of injury. Increased width fitting guarantees comfortable usage for users with swollen feet.
3. Dr Orto footwear has a flexible sole that absorbs a shock wave from a foot contacting the ground, which protects feet against micro injuries.
4. Most of the models have insoles for better walking comfort. The insoles reduce load in the points where the pressure is the most intense and prevent from ulceration and trophic lesions of the skin. Apart from prevention, it also has a hygienic function: it lets feet breathe and prevents them from chafing.
5. The lining of some of Dr Orto models is made of Silber, a soft material, pleasant for feet, made with special technology based on silver ions.

SILBER (Ag):

- has antibacterial and antifungal properties, (inhibits the growth of bacteria, microorganisms, mould and fungi, and provides antibacterial protection), neutralizes unpleasant odour;
- has antiallergic properties, provides thermal comfort by facilitated heat dissipation and maintaining optimal body temperature of 37°C
- absorbs humidity and guarantees optimal feet protection in prolonged usage.

It is especially recommended to users suffering from **diabetic foot syndrome**.

Certificates

DISTINCTIONS AND AWARDS

Our certificates and distinctions

Dr Orto footwear, appreciated by experts, holds many certificates and distinctions:

„Footwear for sensitive feet”

confirms that the footwear is recommended to users with toe deformations (hallux valgus, hammer toe), skin lesions on foot sole and painful spots in the metatarsal area

„Footwear for diabetics (preventive footwear)”

means that this footwear may be used by users with so-called „diabetic foot syndrome”, nerve damage and atherosclerotic extremity ischaemia

In 2006, Dr Orto footwear by Befado was honoured with a gold medal at Poznań International Fair.

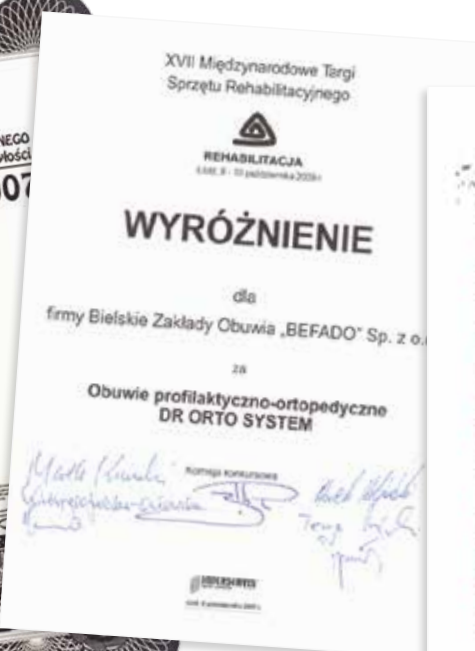

Dr Orto System footwear is recommended by Polish Association of Diabetics.

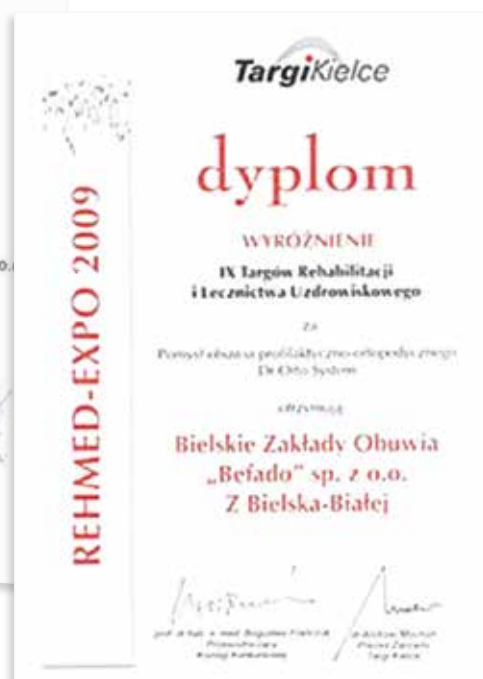

Dr Orto System footwear won the 1st prize in the „rehabilitation equipment” category at the XI „Expo Diabetica” Symposium

Toruń 2007

A distinction for Dr Orto System footwear at the XVII International Fair of Rehabilitation Equipment.

Łódź 2009

A distinction for Dr Orto System footwear at the XVII International Fair of Rehabilitation Equipment.

Kielce 2009

Opinions

OF USERS AND EXPERTS

The footwear has been tested by users suffering from diabetes, especially among patients exposed to and suffering from a diabetic foot syndrome. The tests have been supervised by **the Department and Clinic of Metabolic Diseases of Collegium Medicum of the Jagiellonian University in Cracow**. The footwear has been also assessed by the Shoe Industry Central Laboratory, and, in organoleptic and fitting tests, it fulfilled the requirements of footwear intended for diabetics, for patients with rheumatoid feet and with severe deformities of sensitive feet, to a large extent.

EXPERT OPINION:

„Dr Orto footwear, with its shape and the size of the inside, satisfies the requirements of users with sensitive and rheumatoid feet and the ones who suffer from diabetic foot syndrome.”

Shoe Industry Central Laboratory
Mgr Bożena Rajchel-Chyla, anthropologist, footwear and insole specialist
Dr n. med. Wojciech Radło, orthopaedist

„The tested shoes fulfil the criteria of shoes intended for users with diabetes, especially for the patients exposed to and suffering from diabetic foot syndrome. They can be recommended to diabetics.”

Prof. dr hab. med. Jacek Sieradzki
the head of the Department and the Clinic of Metabolic Diseases, CM, Jagiellonian University

„...the shoes can be used as therapeutic footwear for users suffering from initial or advanced stages of rheumatoid arthritis lesions in feet”

Lek. Wojciech Owsiany
Orthopaedy and Locomotor System Traumatology Specialist

USER OPINIONS:

*„...all my life I have not been able to find footwear that would fit my feet comfortably, until I tried Dr Orto footwear. (...)
(...) These shoes are light, very comfortable and the insole increases walking comfort.”*

Danuta Zając, aged 78

“...very comfortable, flexible and, what is the most important, my feet do not sweat when I’m wearing them. (...)The Dr Orto sole gave maximum comfort to my foot, which has been operated on and requires special care, which is a comfortable and light footwear.”

J. Bogacz, aged 72

„I am very happy with these shoes; I use them as outdoor footwear and at home, because they are so comfortable, and this is what counts for elderly users...”

Stefania Motyka, aged 90

„My feet require appropriate footwear that could provide comfort to my disfigured and often cold feet (...) The Orto-soled footwear provides comfort that my legs need.”

Elżbieta Błachut, aged 80

THE PARTS THAT UNFASTEN FULLY

TONGUE AND QUARTER UNFASTEN

FLEXIBLE UPPER

Dr Orto insole

Dr Orto footwear has an insole that considerably improves walking comfort. In the case of a diabetic foot syndrome, the insole reduces the load in the points where the pressure is the most intense and prevents from ulceration and trophic lesions of the skin. Apart from prevention, it also has a hygienic function: lets feet breathe and prevents them from chafing.

1. It allows for optimal pressure distribution over the entire surface.
2. It supports all the foot arches perfectly.
3. It contributes to keeping a foot's precise axial movement.
4. With its flexibility, it absorbs shocks and protects lower limb joints and the spine
5. It prevents lower limbs against fatigue.
6. With its special coating layer, it prevents a foot from relocating against the shoe.

Ag A special material with active silver ions has been used in insole production.

It is especially recommended to diabetics.

For people with feet recovering from injuries, operations or wearing an orthopedic cast on.
